1. EXECUTIVE SUMMARY

The security assessment for "SYNTHETIC_SENTINEL_V4_DEMO" was conducted on behalf of Nexus Cyber Corp. A total of 5 unique vulnerabilities were identified across the defined scope. This document provides a structured breakdown of each finding, their potential impact, and recommended remediation steps to reduce organizational risk exposure.

Vulnerability Distribution by Severity

2. TECHNICAL SCOPE

The following assets were authorized and included in the scope of this security audit. Any asset not explicitly listed here was considered out of bounds and was not tested.

Authorized Domains:

```
> staging.nexuscyber.corp
> portal-dev.nexuscyber.corp
```

Authorized IP Ranges:

```
> 192.168.100.0/24
> 10.0.4.0/22
```

Strict Exclusions:

Strictly avoid testing live main gateway: api.nexuscyber.corp. Do not run high-volume DoS scanners.

3. VULNERABILITY MATRIX

ID	SEVERITY	VULNERABILITY	ASSET	CVSS
RX-001	CRITICAL	SQL Injection in User Login Gateway	staging.nexuscyber.corp/api/v2/auth/login	9.8
RX-002	HIGH	Hardcoded HS256 JWT Secret Leakage	portal-dev.nexuscyber.corp	8.9
RX-003	MEDIUM	Stored Cross-Site Scripting (XSS) in Dashboard Customization	staging.nexuscyber.corp/dashboard/settings	6.1
RX-004	MEDIUM	Insecure Direct Object Reference (IDOR) on Profile Fetching	staging.nexuscyber.corp/api/v2/profiles/{id}	6.5
RX-005	LOW	Dangling CNAME / AWS S3 Subdomain Takeover	assets-dev.nexuscyber.corp	3.5

4. REMEDIATION ROADMAP

RX-001

Dangling CNAME / AWS S3 Subdomain Takeover

LOW

AFFECTED ASSET: [assets-dev.nexuscyber.corp](#) CVSS: 3.5

Technical Description

The subdomain `assets-dev.nexuscyber.corp` points to an AWS S3 bucket that has been deleted or unclaimed. An attacker could claim this bucket name and serve arbitrary malicious script libraries to users visiting the application.

Remediation Instructions

Update the organization's DNS zone files to remove the dangling CNAME record for `assets-dev.nexuscyber.corp`, or re-register the S3 bucket under the authorized AWS account.
